All About DOS

Enhanced Edition

Produced by:
Brian Wiser & Bill Martens
ACKNOWLEDGEMENTS

First and foremost, we would like to thank the original contributors:

Special thanks to Steve Wozniak – just because.

Thanks to everyone who joined the A.P.P.L.E. user group, read Call-A.P.P.L.E. magazine, made contributions, and supported our endeavors.

The Cover and Book were designed by Brian Wiser.

PRODUCTION

Brian Wiser → Design, Layout, Art, Editing
Bill Martens → Scanning, Editing

DISCLAIMER

No part of this book may be reproduced, distributed or transmitted in any form or by any means, including photocopying, scanning, or other electronic or mechanical methods, without prior written permission of the publisher, except in the case of brief quotations contained in articles and reviews, and program listings that may be entered, stored and executed in a computer system, but not reproduced for publication. Thank you for respecting the intellectual property of the authors and publisher.

All About DOS programs are available on a disk image from the A.P.P.L.E. website: www.callapple.org. No warranty of disk images is made or implied and should be used at your own risk.

All About DOS: Enhanced Edition is an independent publication and has not been authorized, sponsored, or otherwise approved by any institution, public or private. While all possible steps have been taken to ensure that the information included within is accurate, the publisher, producers, and authors shall have no liability or responsibility for any errors or omissions, or for loss or damages resulting from the use of the information and programs contained herein.
# CONTENTS

In Depth Charge — Val J. Golding ................................................................. xi

The Second Charge — Bill Martens .............................................................. xiii

## How DOS Works and How to Use It

Get the Most from Your Diskettes — Clay Ruth ........................................ 1
   *a DOS-less data diskette can give you up to 61 more sectors*

DOS Internals — Mark Pump ..................................................................... 13
   *an overview of DOS internal addresses and subroutines*

Using RWTS — A.P.P.L.E. Staff ................................................................. 25
   *technical descriptions of some DOS RWTS subroutines and functions*

Disk II Read/Write Track-Sector — Randy Wigginton, Rick Auricchio .... 29
   *a commented assembly listing of DOS 3.3 RWTS*

A Simplified Approach to RWTS — Bill Parker ......................................... 43
   *new ways to use RWTS, get DOS buffer in an Applesoft string & vice-versa, using ampersand (&)*

## A Closer Look at the Directory

Get File Information — Lou Infeld ......................................................... 55
   *includes a program to read the directory into RAM*

Examining Directory Sectors — David Huffman ....................................... 69
   *a tutorial on how the catalog represents file names*

Personalizing "Disk Volume No." — Edd Marquart ................................. 73
   *a simple program to personalize your diskettes*

A Catalog Edit Program — James E. Hopper ......................................... 75
   *more information on the catalog and a program to help design fancy titles*

Cat Scan — Bill Parker ........................................................................... 93
   *the no-frills program to get the directory into an array*

Rick’s Releter — Rick Sutcliffe ............................................................... 95
   *a cure for inadvertently deleted files*

Directory Fastsort — Stephen D. Page ..................................................... 99
   *in two words: instant alphabetization*

Cataloging with Wildcards — Lee Reynolds ........................................... 109
   *an aid to locating program files*

Cat Trax — Bill Parker ............................................................................ 117
   *reads the directory into an array and prints Track/Sector lists*
Adventures in File Handling

A Text File Tutorial – Allen S. Jensen

A down-to-earth discussion on using sequential and random files

EXEC Files – Lee Reynolds

Some ideas on putting EXEC files to use

So What Did You Expect? – Christopher Volpe

Strange results from an EXEC file program

Variable Line Length – Bob Tucker

A technique to format text files to your needs

The Secret of Q$ – Val J. Golding

The quotable quote

Random Ideas – Val J. Golding

Presenting a random to sequential file converter. Ruffin?

Sequential to Random File Converter – David Goodfellow

Would you believe Sufferin?

Speeding Up DOS

Fast Load Formatter – Mark Brown

This program loads BASIC and binary files 400% faster

How to Break the Speed Limit – Art Schumer

Several hints and techniques for speeding up DOS

Random Access Binary Files – Robert Egbers

Huge random text files waste time and space

Text File Fast Loader – Robert Purves

This speed technique reads a sequential file into RAM

Cutting Down on Overhead – Lee DeRaud

Details on creating a fast boot and improving performance

DOS Patch for 9-Descending Skew – Phil Bryan

One of the easiest speed-up tricks

Repairing a Few Bugs

ROGRAM and Other DOS Traps – Rick Sutcliffe

Now you can banish ROGRAM TOO LARGE

RWTS Trap – Bill Parker

Incompatibilities between DOS, Monitor, and the file manager explained
The $48 Trap – Cornelis Bongers .............................................................. 217
   on earlier paper on the same subject
Squashing a Nasty DOS Bug – Art Schumer ........................................... 219
   now you can write and read appended sequential files longer than 32767 bytes
DOS Patch for 80 Column Cards – Glen Bredon ........................................ 225
   prevent interference from inverse/flashing characters, enable Control-C catalog abort feature
The Large Sector Number Bug – Harry L. Mahoney III ............................ 227
   a simple patch to display correct sector length for large files
Detour a Dastardly DOS Dilemma – Craig Peterson .................................. 231
   why the combination of BRUN and COUT sometimes messes up the Stack
One Down, One to Go – Richard D. Norling ........................................... 233
   again the sector number bug and then some
Who Stole My ? – Thomas G. Williams ................................................... 241
   on exploration of the mysterious missing first character

A Plethora of DOS Modifications

DOS Customizing – Bob Hanson ............................................................. 245
   changing command names and error messages
Free the Slaves – Bob Hanson ................................................................. 251
   how to customize a master disk using relocation routines with Integer BASIC
DOS Ditties – Bob Hanson ...................................................................... 257
   odds and end to coerce DOS into accepting your ideas
The DOS Amalgam – Erv Edge ................................................................. 259
   locating and using the available "holes" in DOS
The $300 Syndrome – Horst K. Schneider .............................................. 267
   what to do when you run out of space on Page 3

"R" Files: Relocatable Object Code

All About "R" Files – Chris Green ............................................................. 275
   creating relocatable code with the Toolkit assembler
RLOADing with DOS on the RAM Card – Cornelis Bongers ...................... 281
   a utility to use R files with RAM card DOS

<tbody>
<tr>
<td>The Compleat ZAP – Jan Poort with Clay Ruth</td>
<td>285</td>
</tr>
<tr>
<td>this utility will read/write a sector and create/un-create a data disk among other things</td>
<td></td>
</tr>
<tr>
<td>Patching DOS 3.3 – Paul Leighton</td>
<td>329</td>
</tr>
<tr>
<td>a BASIC program to automate DOS patches</td>
<td></td>
</tr>
<tr>
<td>Sector Search – Val J. Golding</td>
<td>331</td>
</tr>
<tr>
<td>a super fast assembly language routine which searches the disk for a group of hex or ASCII bytes</td>
<td></td>
</tr>
<tr>
<td>Copy DOS – Michael B. Norton, DVM</td>
<td>349</td>
</tr>
<tr>
<td>a way to use COPYA to transfer DOS tracks only</td>
<td></td>
</tr>
<tr>
<td>Disk Map – Ken Prouty</td>
<td>351</td>
</tr>
<tr>
<td>a speedy DOS patch utility to map free and used diskette sectors</td>
<td></td>
</tr>
<tr>
<td>Disk Error Checking – Anthony Rose</td>
<td>359</td>
</tr>
<tr>
<td>helps prevent disk crashes before they occur</td>
<td></td>
</tr>
<tr>
<td>Clock Saver – Charles McCoy</td>
<td>361</td>
</tr>
<tr>
<td>now you can use a Mountain clock to time stamp your saves</td>
<td></td>
</tr>
<tr>
<td>Automated Initializing – J.M. Prosser</td>
<td>363</td>
</tr>
<tr>
<td>using on EXEC file to initialize your disks</td>
<td></td>
</tr>
<tr>
<td>DOS Version Finder – Val J. Golding</td>
<td>367</td>
</tr>
<tr>
<td>a short program tells whether you have a slave or master disk and the DOS version</td>
<td></td>
</tr>
<tr>
<td>The Smart RUN Command – Kenneth Gunther</td>
<td>369</td>
</tr>
<tr>
<td>a modification to use the RUN command to run any type file</td>
<td></td>
</tr>
<tr>
<td>Dual Drive Master Create – Michael B. Norton, DVM</td>
<td>371</td>
</tr>
<tr>
<td>now you can use Master Create from any slot or drive</td>
<td></td>
</tr>
<tr>
<td>Pager + – Gary B. Little</td>
<td>375</td>
</tr>
<tr>
<td>utility to add page formatting to the Big Mac assembler</td>
<td></td>
</tr>
<tr>
<td>TYPE: Everything you Ever Wanted to Filedump – Brian L. Matthews</td>
<td>379</td>
</tr>
<tr>
<td>now comes a dump utility that dumps all files, including BASIC and Random</td>
<td></td>
</tr>
<tr>
<td>TDUMPing with DOS on the RAM card – Cornelis Bongers</td>
<td>383</td>
</tr>
<tr>
<td>a FILEDUMP utility compatible with relocated DOS</td>
<td></td>
</tr>
<tr>
<td>Screen Dump: A DOS Command Utility – Sandy Mossberg</td>
<td>385</td>
</tr>
<tr>
<td>automatically dumps the text screen to a printer</td>
<td></td>

<tr>
<td>two easy patches to DOS and you have both a RAM card and firmware card</td>
<td></td>
</tr>
</tbody>
</table>
New Uses for the Language Card – Mark Harris ........................................................................... 433
accessing Language Card RAM and Overlays, a 3-pass copy program using a 16K card

Using a Firmware Card with Big Mac.LC – David Deever .............................................................. 455
two more ways to put that rusty firmware card to use

Moving Big Mac Symbol Table – Thomas G. Williams ................................................................. 457
help Symbol Symon find the Big Mac.LC symbol table

Living With a Language Card – James E. Hopper and J.B. Matthews ........................................... 459
a fast boot program for the language card

Other Operating Systems

DOS / Pascal Bilingual Disks: A Call-A.P.P.L.E. Technique – Mat Davis ........................................... 475
methodology of creating disks which are usable under DOS and Pascal

CP/MAGIC: Nibbling Away at CP/M – Murrow Arnow ............................................................... 481
comparison of CP/M vs DOS 3.3 floppy disk data storage

utility to convert CP/M Disks to DOS 3.3

Reading TRS-80 and Atari Disks – Sam F. Vass, Lee Meador ......................................................... 495
this program gets the data into memory – you take it from there

DOS 4.1: Build 46 – Walland Philip Vrbancic, Jr ........................................................................... 511
a reimagined DOS with more power and flexibility, compatible with DOS 3.3

Appendices

Appendix A: ASCII Subset Used by Apple II and II Plus (No lower case) ....................................... 531
Appendix B: Keys and Their Associated ASCII Codes ..................................................................... 532
Appendix C: ASCII Values of Apple IIe / IIc Latin Character Set .................................................... 533
Appendix D: Volume Table Of Contents (VTOC) Structure ............................................................. 535
Appendix E: Volume Table Of Contents (VTOC) Layout in Hex ....................................................... 536
Appendix F: Disk Catalog Structure and Layout ................................................................................ 537
Appendix G: 5.25" Disk Capacity ........................................................................................................ 538
Appendix H: System Memory Map ................................................................................................... 539
Appendix I: Zero Page Usage ............................................................................................................ 540
Appendix J: Applesoft Memory Locations ........................................................................................ 541
Appendix K: 6502/65C02 Microprocessor Instructions ...................................................................... 549
Appendix L: Hex Operation Codes ................................................................................................... 550
Appendix M: Instruction Codes .......................................................................................................... 551
Appendix N: Operation Notation Summary ...................................................................................... 556
Appendix O: Memory Locations Important in Interrupt Processing .................................................. 557

Glossary

Now you’ll always know the correct definitions for Apple, Nibble, VAL, and WOZ ............................. 559
