About Rick Sutcliffe

Rick Sutcliffe, (a.k.a. The Northern Spy) is professor of Computing Science and Mathematics at Canada's Trinity Western University. He has been involved as a member or consultant with the boards of several communities and organizations, and participated in developing industry standards at the national and international level.

Rick has been a mainstay in the Modula-2 and A.P.P.L.E. worlds for more than 35 years. He is a co-author of the Modula-2 programming language R10 dialect. Additionally, he is a long time technology author and has written two textbooks and nine alternate history science fiction novels, one named best ePublished science fiction novel for 2003.

His columns have appeared in numerous magazines and newspapers (paper and online), and he's a regular speaker at churches, schools, academic meetings, and conferences. His "Northern Spy" column has made regular appearances in Call-A.P.P.L.E. magazine.

He and his wife Joyce have lived in the Aldergrove/Bradner area of British Columbia, Canada since 1972.
CONTENTS

1. Getting Started ............................................................ 1

2. The ASDM Applesoft Programs ...................... 3
   2.1. The Executive ................................................................. 4
   2.2. The Disk Director ............................................................ 4
   2.3. The DOS Operator ........................................................... 6
   2.4. Notes (for all three programs) ................................. 7

3. Ampermanager Introduction ............................. 9

4. Shorthand Applesoft Commands ............... 11
   4.1. Screen Utilities .............................................................. 11
   4.2. The Lower Case Utility ................................................. 12
   4.3. Miscellaneous Utilities ................................................. 14

5. Definitions of Conventions .......................... 15
6. ASDM Applesoft Utilities ................................................. 17
   6.1. & WAIT (wait a specified amount of time) ..................... 17
   6.2. & BEEP (beep the Apple’s speaker) ........................... 18
   6.3. & $ (output a hex number in decimal) ........................ 18
   6.4. & % (output a decimal number in hex) .......................... 18
   6.5. & FIX (Redbook fix to the stack) ............................... 18
   6.6. & SWAP (swap two variables) .................................... 18
   6.7. & MOVE (copy a string from a specified address) ........... 18
   6.8. & REV (reverse a string) .......................................... 19
   6.9. & LET (string substitution) ........................................ 19
   6.10. & LET (create new string descriptor) .......................... 20
   6.11. & LET (set variable to a 2-byte integer) ..................... 20
   6.12. & LET (set variable to contents of memory) .................. 20
   6.13. & LET (perform substring search) .............................. 21
   6.14. & GOTO (GOTO a variable) ....................................... 21
   6.15. & GOSUB (GOSUB a variable) .................................... 21
   6.16. & INPUT (input with commas and colons) ..................... 21
   6.17. & CRT (convert string format) ................................... 22
   6.18. & CRTP (change case of strings) ............................... 23
   6.19. & POKE (modified POKE command) .............................. 24
   6.20. & CALL (modified CALL command) .............................. 24
   6.21. & G (force garbage collection) .................................. 25
   6.22. & LL (long list) .................................................... 25
   6.23. & L (condensed list) .............................................. 25
   6.24. & LF (formatted list) ............................................. 25
   6.25. & RESTORE (RESTORE to a line) .............................. 26
7. The Extended PRINT Statement

7.1. Literal Printing

7.2. Repeat Printing

7.3. Screen Management

7.4. Decimal to Hex Printing

7.5. Printing Contents of Memory

7.6. Clear Screen Print

7.7. IN#$ (substring search in PRINT statement)

7.8. Print Using (user formatting)

8. Printer Utility

9. DOS Catalogs

9.1. &C – Catalog

9.2. &CD – Catalog Deleted Files

9.3. &CC – Continuous Catalog

9.4. &CE – Extended Catalog

9.5. &FRE – Print Free Sectors

10. ASDM DOS Utilities

10.1. & RELETE (undelete a file)

10.2. & SWIRD

10.3. &DR – Switch Drives

10.4. &B – Length and Location of Last BLOAD

10.5. & GETB (Get a buffer from DOS)

10.6. & READ (Read data into a buffer)

10.7. & WRITE (Write data to disk from memory)
11. Memory Utilities...........................................47
  11.1. & DUMP (Dump data to the screen) ........47
  11.2. & ZAP (Change memory) .......................49
  11.3. & REG (Display the contents of register memory) ....50

12. Management Facilities..............................51
  12.1. Automatic .............................................51
  12.2. Cold-start..............................................52
  12.3. Warm-start.............................................52
  12.4. Semi-automatic.................................52
  12.5. Repeat ..................................................54
